

New generation of **Time & Cost** Estimation Software

Plan your well effortlessly,
from Scope to AFE generation.

CAMPAIGN MODELLING

Calculate time and cost for entire well campaigns.

Spot trends and refine models in real-time for more precise cost models as the campaign progresses.

COLLABORATIVE WORKSPACES

Distribute workload seamlessly across remote teams.

Assign tasks with easy-to-use action tracking system.

TAGGING

Tag elements to assess their contributions to time and cost.

Filter by tag for batch operations and NPT insights.

AUTO - DISTRIBUTION

Automate input distributions from historical data.

Reduce manual data entry and minimize errors.

MODERN ARCHITECTURE & INTEGRATIONS

Built on a modern framework with open API.

Supports integration for both input and output systems.

SECURITY & COMPLIANCE

Aligns with industry-leading cybersecurity standards.

Supports SSO for seamless and secure user access management.

New generation of Time & Cost Estimation Software

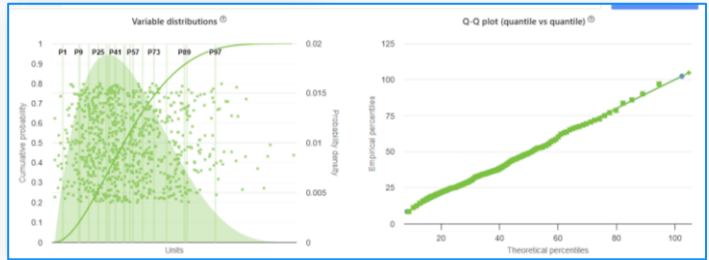

Campaign modelling

Harness the power of Monte Carlo simulation for precise time and cost estimates across your entire campaign. PLANS™ delivers detailed probabilistic forecasts (P10, P50, P90), helping to maximise efficiency and minimise uncertainty.

Auto-distribution

Utilise your historical offset well data in PLANS™ to generate statistical distributions for inputs, as the algorithm recommends optimal graphical fits based on data points to ensure accurate time and cost estimates.

The software allows seamless integration of performance optimisations.
